

ISSUE LOG — ETHICAL EDITING ASSIGNMENT

CSE-302 Technical Writing and Presentation | Submission: August 11, 2026

No.	Page/Section	Problem found	Category	Correction / justification
1	p.3, Abstract	Claims congestion was completely solved and immediate deployment was justified.	Accuracy / honesty	Narrowed the claim to preliminary pilot evidence and recommended further validation.
2	p.3, Abstract	89 s to 72 s was reported as an 81% reduction.	Numerical accuracy	Recalculated reduction as approximately 19.1%.
3	p.3, Abstract	Accident reduction was presented as proof of safety from a short period.	Safety / evidence	Removed causal safety claim and required longer controlled evaluation.
4	p.3, Abstract	137% public satisfaction was reported.	Numerical / data integrity	Marked survey result invalid because a respondent proportion cannot exceed 100%.
5	p.3, Abstract	99.7% accuracy was claimed for every weather condition although rain data were unavailable.	Accuracy / transparency	Limited claim and required testing across relevant conditions.
6	p.3, Introduction	External material was presented as common knowledge with no citation.	Plagiarism / citation	Required identifiable source and proper acknowledgement.
7	p.3, Introduction	AI was claimed never to make mistakes.	Accuracy	Replaced with cautious performance language and uncertainty.
8	p.3, Introduction	Faces, number plates and conversations were monitored without ethical concern.	Privacy	Introduced data minimization, purpose limitation and access controls.
9	p.3, Introduction	Pedestrians, rickshaw users and elderly people were dismissed as delays.	Bias / fairness	Required inclusive stakeholder consideration and representative sampling.
10	p.3, Objectives	Objective demanded 100% detection accuracy.	Technical realism	Replaced with defined, measurable evaluation using independent test data.
11	p.4, Objectives	Manual override was to be removed.	Safety	Required authorized manual override and fail-safe control.
12	p.4, Objectives	All video/audio was to be kept forever.	Privacy	Introduced minimum necessary collection and defined retention.
13	p.4, Related Work	Class notes were copied without attribution.	Plagiarism	Require paraphrase/quotation and attribution.
14	p.4, Related Work	Unidentified paper/blog/Wikipedia/vendor claims were treated as evidence.	Citation / evidence	Separated verifiable evidence from unsupported claims.
15	p.4, Related Work	Negative privacy/safety studies were excluded.	Bias / objectivity	Required balanced evidence including risks.

No.	Page/Section	Problem found	Category	Correction / justification
16	p.5, Methodology	Four failed days were removed from analysis.	Data integrity	Retain failures and report their effect on conclusions.
17	p.5, Methodology	92 survey responses were shown although 120 were claimed.	Data integrity	Do not invent missing responses; report inconsistency.
18	p.5, Methodology	Sample was treated as representative despite convenience sampling.	Sampling bias	Describe it as convenience sample and propose representative sampling.
19	p.5, Architecture	Raw faces/plates/audio were continuously captured.	Privacy	Use data minimization and edge processing where feasible.
20	p.5, Architecture	Shared administrator password used by multiple parties.	Cybersecurity	Require individual accounts, least privilege and audit logs.
21	p.5, Architecture	Public Wi-Fi was used for system data.	Cybersecurity	Require protected communication and controlled network architecture.
22	p.5, Architecture	No manual control and no physical emergency stop.	Safety	Require tested manual override and emergency control.
23	p.5, Figure 1	Vendor figure used without recorded permission/source details.	Copyright	Replace with original diagram or properly licensed/attribution visual.
24	p.6, Data Collection	Consent was assumed from entering a road.	Privacy / ethics	Require appropriate notice, lawful basis and privacy safeguards.
25	p.6, Data Collection	Raw data stored indefinitely.	Privacy	Set retention and secure deletion rules.
26	p.6, Data Collection	Credential-like information was printed.	Confidentiality	Remove identifiers/credentials from report.
27	p.6, Model Testing	Training accuracy used as final accuracy.	Methodology	Use separate validation and independent test sets.
28	p.6, Model Testing	Wrongly classified images were deleted.	Data integrity	Retain predefined evaluation cases and report failures.
29	p.6, Field Test	Public-road test lacked formal safety review.	Safety	Require controlled testing and independent safety review.
30	p.6, Field Test	11-minute red-light freeze was omitted.	Transparency / safety	Retain and investigate safety incident.
31	p.6, Results	31 to 24 vehicles reported as 60% reduction.	Numerical accuracy	Recalculated as approximately 22.6%.
32	p.6, Results	2.5 to 2.1 kWh reported as 45% saving.	Numerical accuracy	Simple reduction is approximately 16%; measurement basis must be verified.
33	p.7, Results	Crash counts treated as proof of safety.	Evidence / safety	State that short, differing periods cannot establish causality.
34	p.7, Figure 2	Vertical axis truncated near 97% to exaggerate difference.	Visual ethics	Use an honest scale and common metric.
35	p.7, Figure 2	Old and new accuracy used different definitions.	Methodology	Require same metric and test protocol.
36	p.7, Survey	Percentages total 137%.	Numerical / visual ethics	Treat table as invalid pending raw-data verification.

No.	Page/Section	Problem found	Category	Correction / justification
37	p.7, Survey	Complaints were removed because handwriting was difficult.	Bias / transparency	Retain all responses and document exclusion rules before analysis.
38	p.8, Discussion	AI was called better than humans in all situations.	Accuracy	Removed universal claim and stated limitations.
39	p.8, Discussion	Sponsor support was not disclosed as conflict.	Transparency	Disclose sponsor contributions and review involvement.
40	p.8, Discussion	Competitors were not evaluated to protect sponsor relationship.	Objectivity	Require fair comparison/procurement criteria.
41	p.8, Discussion	No limitations were claimed despite missing data.	Transparency	Added explicit limitations.
42	p.8, Safety	Manual override was permanently disabled.	Safety	Require human oversight and authorized override.
43	p.8, Safety	Last AI command remains active during network failure.	Safety / reliability	Use safe local fallback rather than stale command.
44	p.8, Safety	Updates installed directly from vendor server.	Cybersecurity	Require authenticated, integrity-checked and tested updates.
45	p.8, Safety	Penetration testing postponed until after citywide deployment.	Cybersecurity	Require security testing before wider deployment.
46	p.8, Safety	Public warning signs were discouraged.	Transparency / privacy	Provide appropriate notice and explain data practices.
47	p.9, Cost	$30 \times \text{BDT } 250,000 = \text{BDT } 7,500,000$, not BDT 4,500,000.	Numerical accuracy	Corrected arithmetic and noted cost-model gap.
48	p.9, Cost	Annual saving based on a social-media claim.	Evidence	Require documented, verifiable savings data.
49	p.9, Cost	Maintenance, security and data costs omitted.	Completeness	Included lifecycle costs in revised business-case requirements.
50	p.9, Cost	Only sponsor supplier recommended.	Conflict / procurement	Require comparison and fair procurement.
51	p.9, Copyright	Google Images treated as automatically fair use.	Copyright	Use original or properly licensed/attribution material.
52	p.9, Conclusion	99.7% accuracy and zero risk claimed.	Accuracy / safety	Removed absolute claims and added limitations.
53	p.9, Conclusion	Immediate citywide purchase recommended.	Safety / evidence	Recommended staged pilot and independent validation.
54	p.9, Conclusion	Raw face/plate/audio data kept forever.	Privacy	Recommended limited retention and secure deletion.
55	p.9, References	References lacked complete bibliographic details.	Citation	Do not invent details; identify evidence gaps and replace with verified sources for real deployment.
56	Appendix	Rain failure marked 'Delete from analysis'.	Data integrity	Retain adverse observations and include them in evaluation.
57	Appendix	Software freeze marked 'Do not mention'.	Transparency / safety	Report the incident and use it in safety analysis.

No.	Page/Section	Problem found	Category	Correction / justification
58	Appendix	Night error marked for removal.	Bias / data integrity	Retain night-time failures and test them explicitly.

Note: The issue log is based on the supplied flawed report. Where the source does not provide enough information to reconstruct a value, the correction deliberately does not invent data; it records the evidence gap and recommends verification.
